

# Touchless Access Solutions

# Touchless Access Solutions By Allegion™

- Studies have found that viruses can survive on certain surfaces for days unless properly disinfected. As a result, facilities across the world are elevating their efforts to provide clean, safe environments. This includes door hardware surfaces.
- People touch door hardware, like exit devices and levers, several times a day, especially in high-traffic applications. From the main entrance of an office building to doors throughout a hospital, best practices show that keeping these areas clean and disinfected help prevent the transmission of contaminants.
- As a result Allegion developed a comprehensive portfolio of solutions available to create touchless access solutions in multifamily properties, healthcare facilities, commercial offices, and education campuses.

## 3. Actuators

Actuators provide a signal that activates the automatic operator to open the door, including "wave to open", motion detection or contactless readers.

[View Actuators](#)

## 4. Safety Sensors

Allegion offers a safety Sensors which is used in conjunction with an actuator to prevent the door from closing whilst you are passing or in the path of the closing door, ensuring your safe path through the opening.

## 1. Mobile Enabled Readers

A contactless credential does not require a user to touch the reader; simply present the card near it. Allegion offers a full range of credential technologies, including secure smart options.

## 2. Automatic Operators

For applications where most pedestrians operate the door electronically, consider electromechanical automatic operators. These utilize a motor gearbox and control box to perform the opening and closing function.

[Check out this flow chart to help choose the right auto operator.](#)
