

Client:	Sheppard Robson & Morgan Ashurst
Location:	Ipswich, UK
Products Used:	Wide range of Briton & CISA ironmongery

Ironmongery from Briton and CISA product ranges was supplied to achieve the high performance standards and aesthetic requirements set out in the specification of the new build.

Allegion has supplied ironmongery and complete steel doorsets for the new £44 million replacement building at Suffolk New College in Rope Walk, Central Ipswich. The education facility is designed as an 'open campus' and is accessible to the public but safe and secure for the students. Its design is defined by its urban location – providing visual links to the town centre, the station and the waterfront.

Everything from door controls, lockcases, exit hardware and cylinder locks through to contract furniture and pull handles were installed throughout the building.

For this project, Acorn Architectural Ironmongery Ltd worked closely with Sheppard Robson and chose Allegion to fulfil the precise ironmongery specification.
