

Client:	University of Leeds
Location:	Leeds, UK
Products Used:	Digital locking & access control system 3060 from SimonsVoss

The University of Leeds has nine different faculties all of which are divided into school, institutes and centres. The campus which amounts to more than 40 hectares currently consists of 39 buildings - a huge area frequented day in and day out which has to be monitored and managed around the clock.

The digital locking and access control system 3060 from SimonsVoss meets the requirements set by the university. Mechanical locks were replaced with 3,000 electronic cylinders to manage access for 13,000 users.
