

Megaplex Theater

Client:	Larry H. Miller Group
Location:	Salt Lake City, USA
Products Used:	Schlage heavy duty cylindrical locks & Von Duprin 98 Series exit devices

Larry H. Miller Group worked on top notch theatre security with FFKR Architects, a firm who used Allegion to prepare door and hardware schedules.

The building—the former anchor of the Valley Fair Mall in West Valley City—had significant egress challenges, including secure exterior exits for each theater in the 117,988 square foot megaplex and restricted access on doors to the second level projection room.

Allegion's team conducted pre-installation and post-installation walk-throughs of the complex to make sure there were no problems. In the postinstallation walk-through, they checked for proper installation of all locks, which used Schlage/Von Duprin/LCN/Ives fasteners and templates on each brand's respective products.

Today every theatre door is held open with magnets and can be released remotely. All exterior doors have access control requests-to-exit devices and door position indicators.
